Primary Industries

DeSireBull™ – a bull selection decision support tool powered by BREEDPLAN

Laura Penrose ¹ & Dr Brad Walmsley ^{1, 2}

¹ NSW Department of Primary Industries, Livestock Industries Centre, Armidale, NSW, 2350 Australia

² Animal Genetics and Breeding Unit, University of New England, NSW, 2351, Australia

OVERVIEW

What's the problem?

- Complexity of genetic information
- Suboptimal selection decisions

How do we fix it?

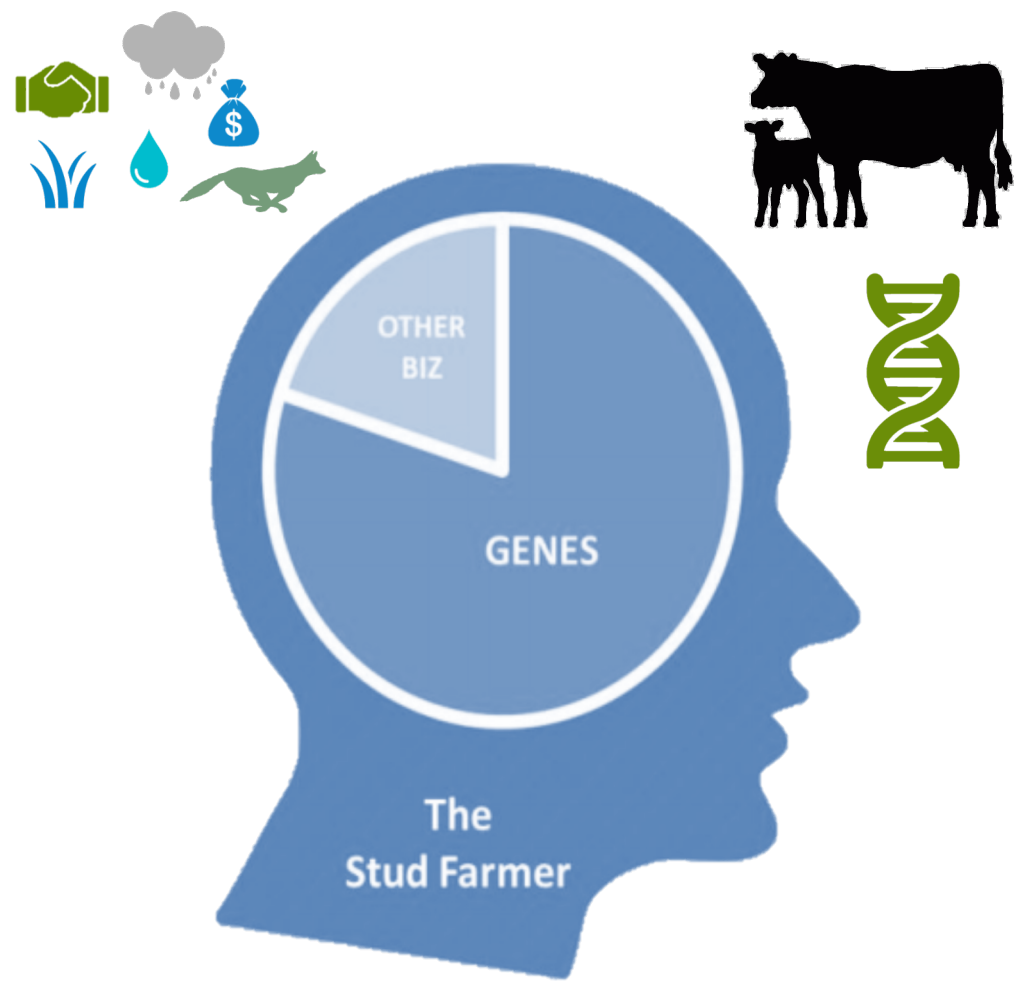

- Alternatives to aid selection decisions

What does it mean?

- Provide some flexibility without completely compromising genetic gain

The main focus

Complexity of genetic information

Estimated breeding values (EBVS)

Accuracies

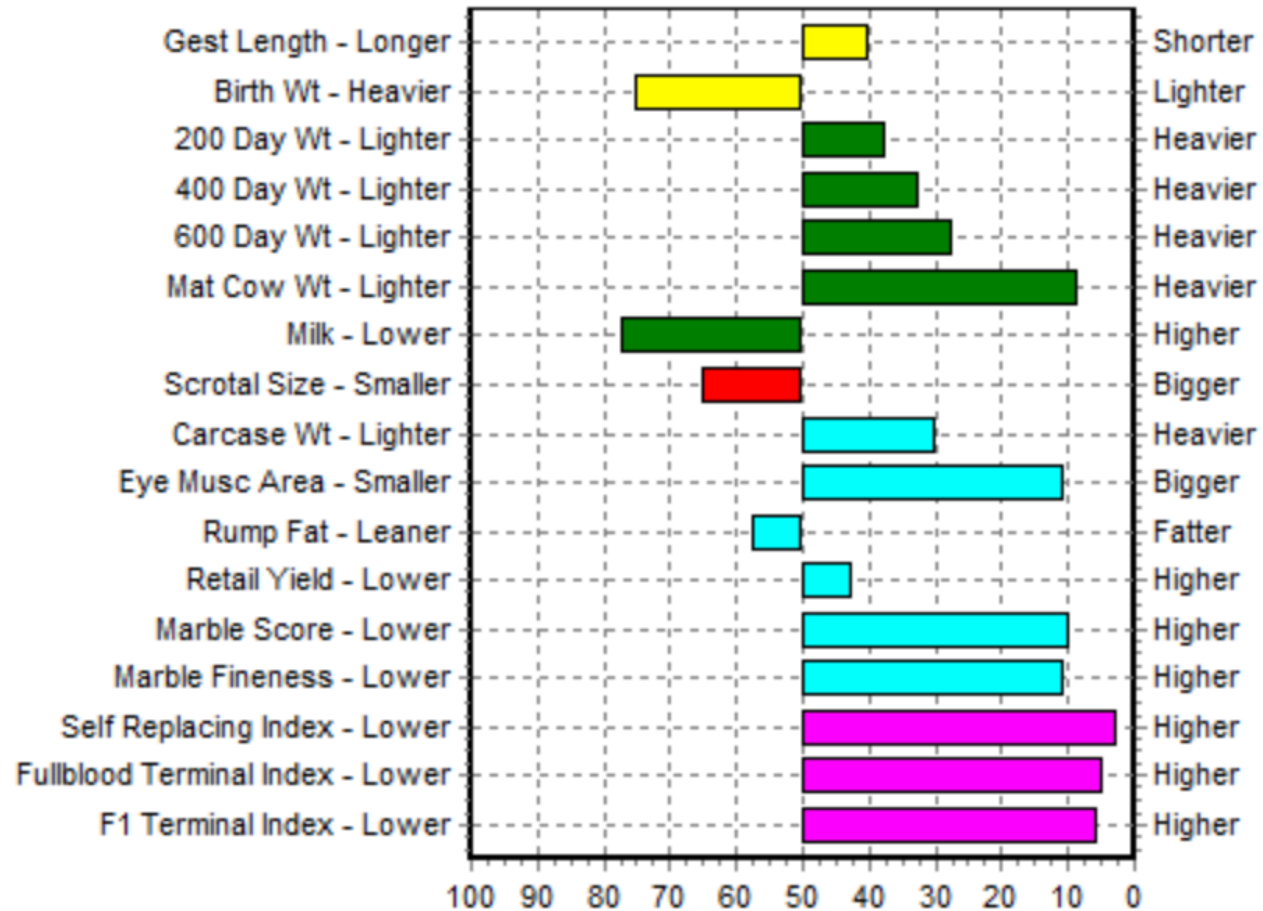

Selection Indexes

Percentile values

Complex information

EBV Percentiles for PEPPERMILL GROVE N0044 (AI)

50th Percentile is the Breed Avg. EBVs for 2017 Born Calves

<http://abri.une.edu.au/online/>

I want to increase carcass weight.

\$Index?

What about other traits I desire?

The result

- Sub-optimal selection decisions
- Decreased rate of genetic gain
- Decreased productivity and profitability

The solution

Integrity of
analysis

Simplicity of
delivery

Finding a balance

Index subgroups

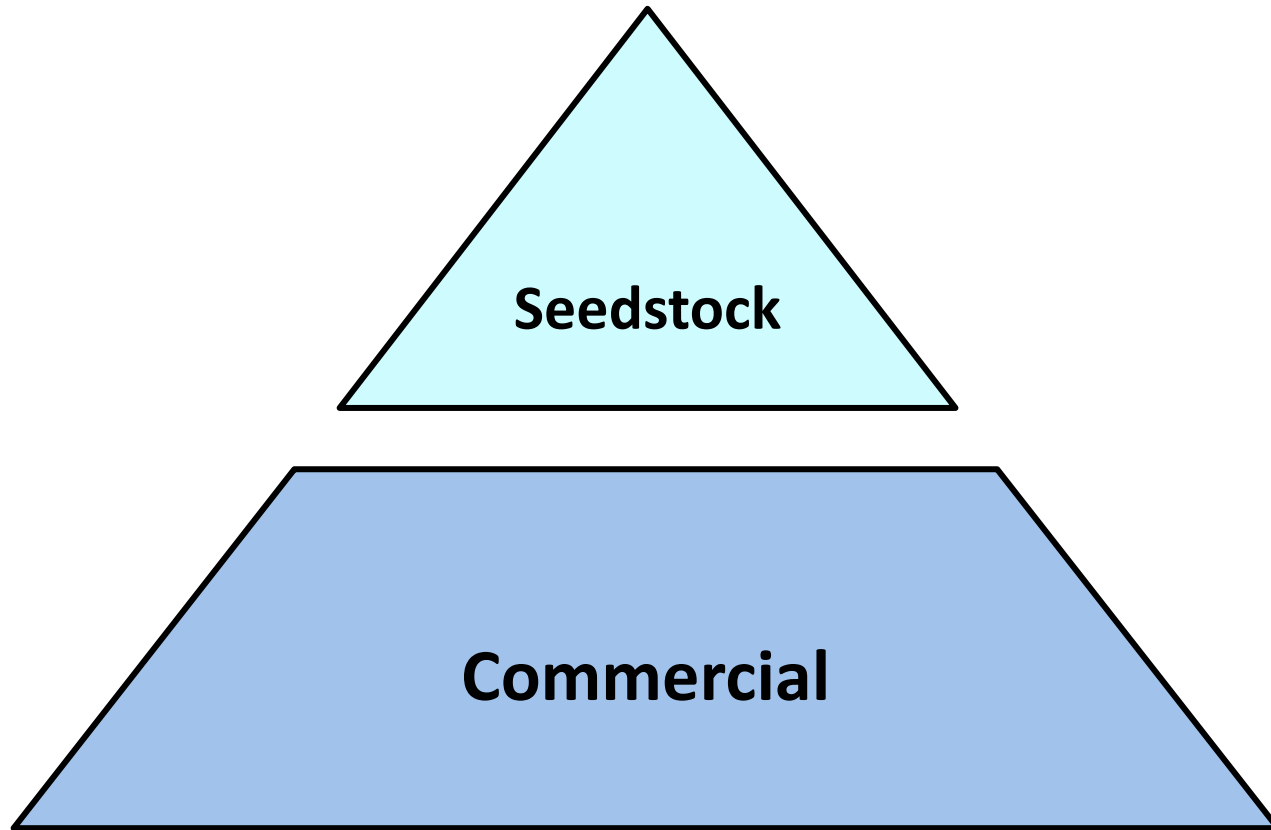

TRAIT CLASSIFICATION

Group	Trait
Birth & calving	Birth weight, Calving ease (dir & mat)
Carcase	Dressing %, Meat %, Rump fat, IMF
Efficiency	MCW, RFI
Fertility	SS, Days to calving
Growth	200 (dir & mat)/400/600 day weight

PRODUCTION SYSTEM CLASSIFICATION

Group	Trait
On-farm	Birth weight, Calving ease (dir & mat), 200 (dir & mat)/400 day weight, SS, Days to calving, MCW, RFI-p
Off-farm	Dressing %, Meat %, Rump fat, IMF, RFI-f, 600 day weight

Scenario testing

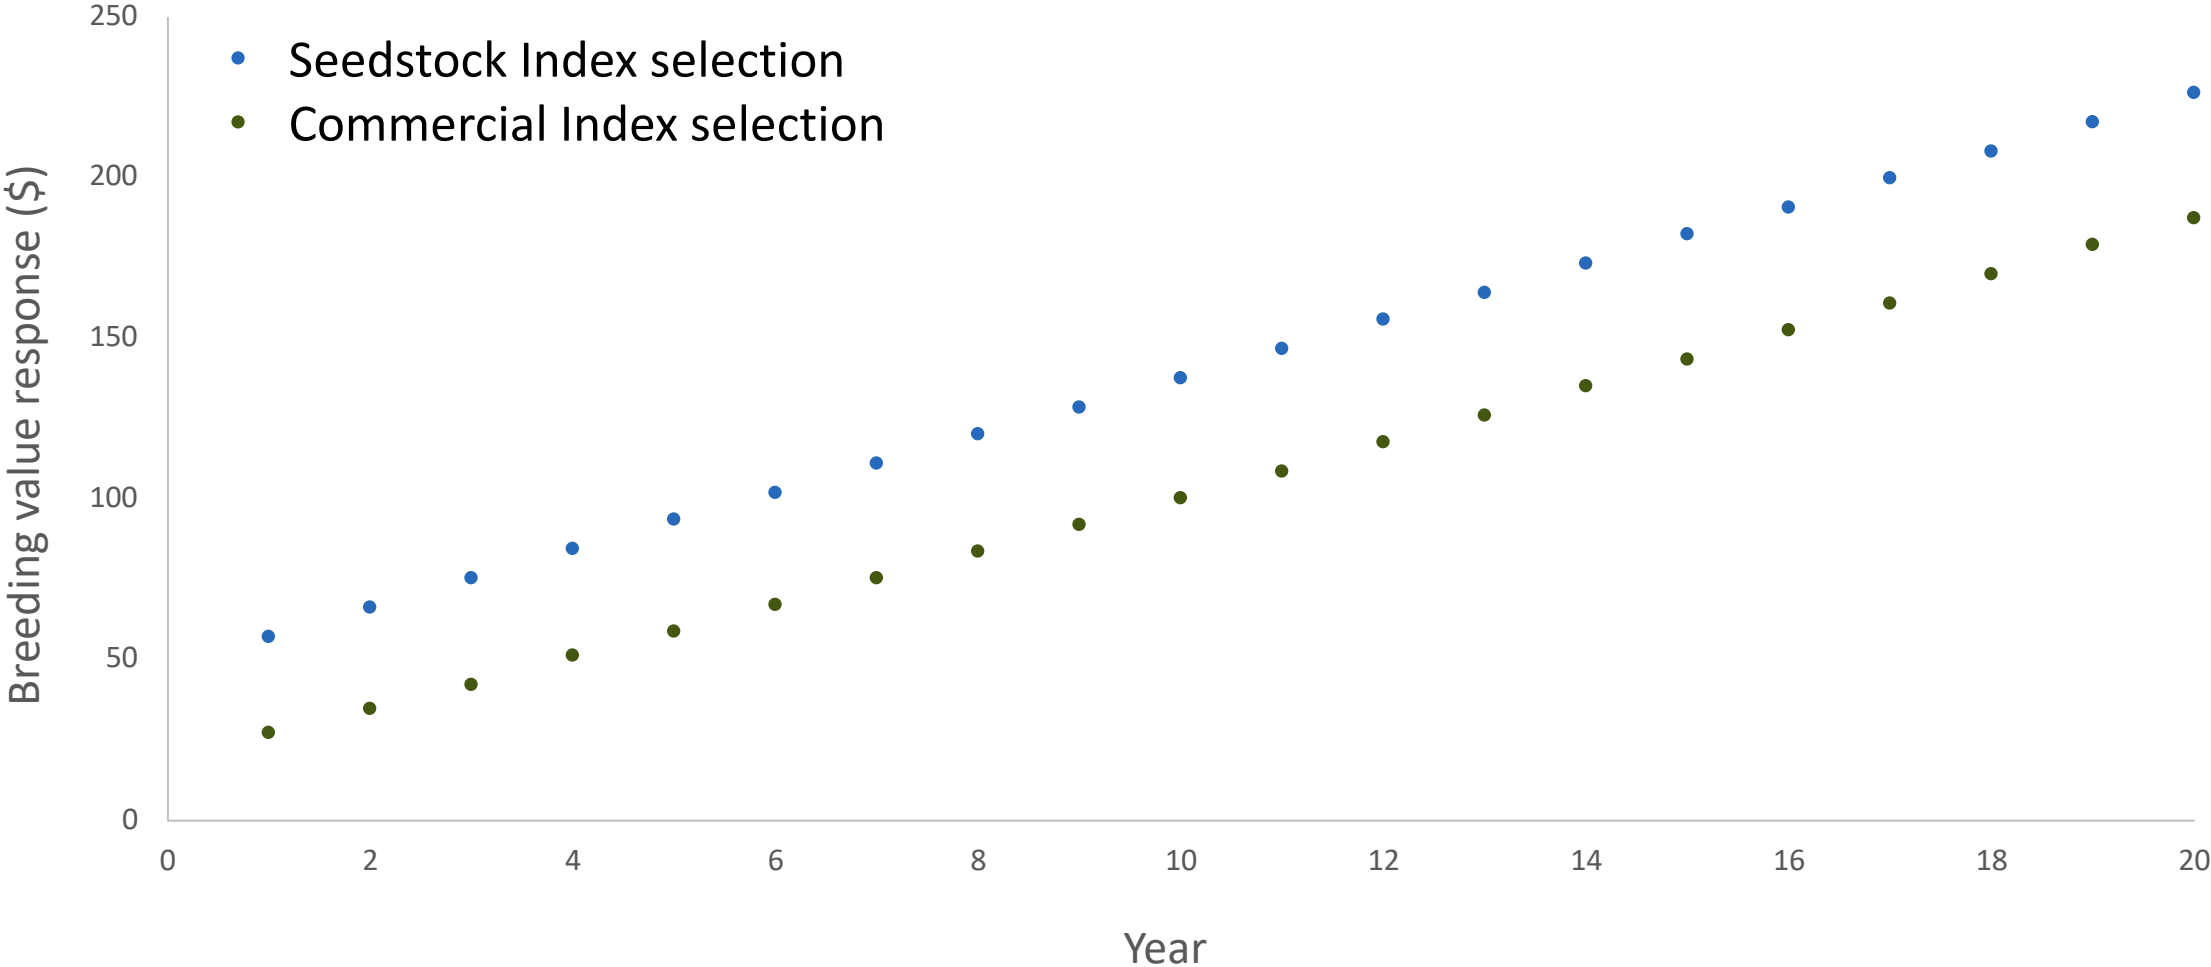

Scenario 1	Scenario 2	Scenario 3
Index	Index	Sub-Group
Index	Sub-Group	Sub-Group
I & I	I & S	S & S

DeSireBull™

What we know will work..

Subgroup trait classification

Index Subgroup	BREEDPLAN trait (EBV)
Birth & calving	Birth weight, Calving ease direct, Calving ease maternal
Carcase	Dressing %, Meat %, Rump fat, Intra-muscular fat
Growth	200DW Direct, 200DW maternal, 400DW, 600DW
Efficiency	Mature cow weight, Residual feed intake
Fertility	Scrotal size, Days to calving

What works for producers?

The DeSireBull difference

Dynamically refine your search with our purpose built EBV Subgroups

We simplify complex genetic data to show you where the value counts

We summarise index components into a single star rating, so you can easily see how bulls stack up

Project aim

A decision support tool that will:

- Simplify the bull selection process
- Match available bulls
- Compare and benchmark
- Provide feedback

Industry outcomes

- Increase demand for and adoption of genetic evaluation (BREEDPLAN)
- Increase productivity and profitability of Australian beef

Summary

Subgroup selection:

- Nucleus drives response
- \$Index selection enables optimal genetic gain
- Commercial subgroup selection allows some flexibility
- Genetic gain not completely compromised

DeSireBull™

- Simplify selection decisions
 - Allow producers some flexibility in decision process
 - Improve rates of genetic gain, productivity and profitability
-
