

Points of Discussion

- Canadian Livestock Traceability and Value Chain Strategy
- Global Traceability
- > Traceability System Components
- Value Chain benefits/opportunities
- **Next Steps**

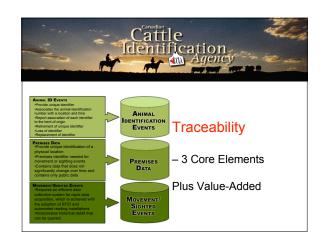

Global ID and Traceability									
Country	Program	Species	Voluntary or Mandatory	Year Implemented	Current type of ID device used	Production Cycle covered			
Argentina	Export Cattle Identification System	Cattle	Mandatory for Export	2003	Visual Ear Tag	Farm of Origin to Slaughter			
Australia	National Livestock Identification System	Cattle Sheep Goats	Mandatory	Cattle Premises Registration since 1960; Indiv ID in 2005. movement in 2006 Sheep and goats: Initial implementation in 2006; full implementation in 2009	Cattle: electronic RFID ear tag or rumen bolus combination Sheep and Goats: visual ear tags	Farm of Origin to Slaughter			
Brazil	Brazilian System of ID and Certification of Origin for Bovine and Buffalo	Cattle and Bison	Mandatory	First Phase 2002: Mandatory - export to EU Second Phase 2006: Mandatory - all foreign exports Third phase 2006: Mandatory for all Foot and Mouth disease areas Fourth Phase 2007; All beef producers	Visual ear tag combined with button ear tag, electronic device, tattoo or iron brand	Farm of Origin to Slaughter			

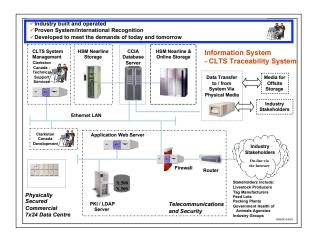

Country	Program	Species	Voluntary or Mandatory	Year Implemented	Current type of ID device used	Production Cycle covered
European Union		Cattle, buffalo, bison, sheep, goats, equine, swine	Mandatory	Cattle, buffalo, bison and equine - 2000 Sheep and goats - 1992 Swine - 1992	Cattle, buffalo, and bison; double ear tag and passport Equine: passport Sheep and goats: double ID Swine: ear tags or Tattoos	Farm of origin to retail
Japan	Beef Traceability Law	Beef Cattle	Mandatory	2003	Ear Tags with minimum requirements	Farm of Origin to Retail

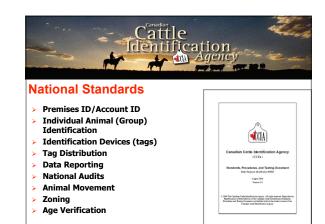

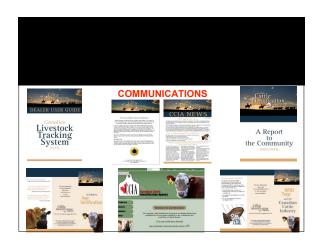

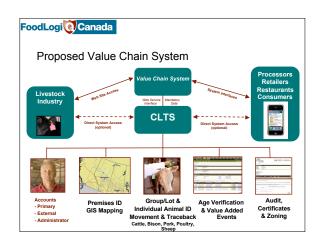

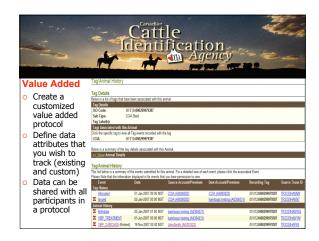

Examples of Value Added Data Attributes Traceable to farm of origin (Premises/Animal Movement)

Verified Beef Program/Quality Starts Here i.e. production

Carcass quality i.e. yield, quality grade, wt., tenderness,

Age Verification

practises

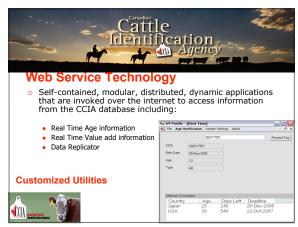

ultrasound

Genetic Flow i.e. genomics/EPDs Animal Health i.e. vaccination protocol

Feedlot performance i.e. DOF, ADG

Feed protocol i.e. rations

Requirements for Value-Chain Success

- Partner with existing, successful entities, using established programs and technology
- > Work at the speed of commerce
- Participation and closed data loop between all livestock sectors
- > Defined information sharing protocol
- > Value to entire chain, beginning with producers
- > Maximize benefits from existing system
- Automate only where it lowers cost or adds value

- The Canadian livestock Traceability and Value Chain System
 > meet expanding domestic and international requirements
- > improve animal health emergency response capabilities
- > ensure full system compliance
- enhance interface with other groups
- > facilitate multi-species
- ensure continued long term sustainability
- increase Domestic and International Harmonization
