

Can EPDs Make Quality Feeder Calves Bring More Money?

By Lee Leachman
2013 BIF: Advancements in Genetic Prediction
Oklahoma City, OK

One of the Industry's Biggest Problems:

Poor information leads to bad market signals.

- Good calves and bad calves bring about the same price.
- Ranchers don't get paid for quality.
- Feedlots can't find or sort quality.
- Despite huge (\$200 / hd) differences in the true value of feeder calves!

Can EPDs Predict Feeder Calf Value?

- Do EPDs work? **YES**
- Do we have EPDs on the economically relevant traits for feedlot profitability? **YES**
 - Rate of gain (post weaning gain)
 - Yield (ribeye area and fat)
 - Quality (marbling)
 - Carcass Weight (CWT EPD or predict from above traits)
 - Feed Intake (Intake EPD when available)
- Do we know what these traits are worth? **YES**
- Now Verified Beef will offer an innovative prediction of feeder calf value!

Who is Verified Beef?

- Based in Bozeman, Montana.
- Started in 1999 by MSU, MSGA, and the Montana Beef Network.
- Privatized in 2008 to function as a for profit entity.
- Owned in partnership by MSGA and the Watts family.
- In 2012, provided A&S, NHTC, NE3, and Grassfed certification for over 200,000 calves. Source nationally, but primarily western states.

Reputation Feeder Cattle Certificate™

An innovative, patent pending program to improve industry value signals.

Three key elements:

1. Genetic Merit Scorecard:
 - A. Relative Market Value / CWT
 - B. Star scores showing quintile rank from 1 (bottom 20%) to 5 (top 20%)
 - i. Average Daily Gain
 - ii. Carcass Weight
 - iii. Feed:Gain
 - iv. Ribeye Area
 - v. Yield Grade
 - vi. Percentage Choice
2. Age & Source Verification
3. Audited Calf Management (vaccination & weaning)

Reputation Feeder Cattle Certificate		Genetic Merit Scorecard																									
Certificate Date: 6/15/2013		Relative Value / CWT: \$22.06																									
Age and Source (USDA Audited Certificate)		Average Daily Gain: *****																									
This certification assures the ranch origin as noted above. The cattle were born between 10/12/2012 and 12/31/2012.		Carcass Weight: *****																									
Calf Management Practices (VB Audited Certificate)		Feedlot: *****																									
These cattle were managed in accordance with prescribed veterinary practices in follows:		Yield Grade: *****																									
<table border="1"> <thead> <tr> <th>Action</th> <th>Purpose</th> <th>Product</th> <th>Administered/Expected Date</th> </tr> </thead> <tbody> <tr> <td>Vaccination</td> <td>Blacktop (Swear & Wain)</td> <td>Vaccine 1</td> <td>3/19/2013 - Audited</td> </tr> <tr> <td>Vaccination</td> <td>7 way (Vet and Powerline)</td> <td>Vaccine 2</td> <td>3/19/2013 - Audited</td> </tr> <tr> <td>Vaccination</td> <td>Blacktop (Swear & Wain)</td> <td>Vaccine 3</td> <td>3/19/2013 - Audited</td> </tr> <tr> <td>Vaccination</td> <td>7 way (Vet and Powerline)</td> <td>Vaccine 4</td> <td>3/19/2013 - Audited</td> </tr> <tr> <td>Waxed</td> <td></td> <td></td> <td>4/23/2013 - Audited</td> </tr> </tbody> </table>		Action	Purpose	Product	Administered/Expected Date	Vaccination	Blacktop (Swear & Wain)	Vaccine 1	3/19/2013 - Audited	Vaccination	7 way (Vet and Powerline)	Vaccine 2	3/19/2013 - Audited	Vaccination	Blacktop (Swear & Wain)	Vaccine 3	3/19/2013 - Audited	Vaccination	7 way (Vet and Powerline)	Vaccine 4	3/19/2013 - Audited	Waxed			4/23/2013 - Audited	Percentage of Choice: *****

The Calculations

- Estimated using BIO's simulation model which predicts post-weaning genetic merit.
- Gather EPDs on all bulls used in a commercial herd for the past 10 years.
- Must have registered bulls with EPDs!
- Use: WW, YW, REA, Marb, Fat, CWT, & Intake if available.
- Use MARC and Leachman EPD base adjustments.
- Standardize traits where variance is inappropriate (Ex.: MS for Salers & South Devon).
- National base price is calculated based on historical breed average EPD weighted for number of registered bulls produced by breed.
- Relative market value is set above or below a \$10.00 / cwt base – only bottom 15% of calves are negative.

How do you select for it?

- Basically the bulls that rank high are:
 - High on post weaning gain.
 - High on ribeye and marbling.
 - Low on fat and high on carcass weight.
 - Better feed efficiency / lower feed intake.
- Highly correlated to Simmental TI (81.7%)
- Highly correlated to Angus \$Beef (91.0%)
- Example Yearling Angus bulls:
 - High: +68 WW, +120 YW, +1.49 Mrb, +1.00 REA, -0.026 Fat, +49 CWT
 - Low: +25 WW, +34 YW, +0.28 Mrb, +0.06 REA, +0.060 Fat, +2 CWT

What does the rancher do?

- Contact Verified Beef.
- Release EPDs to VB from relevant associations.
- VB then runs the numbers.
- After seeing the Relative Market Value, the producer can then decide to order a certificate.
- Must age and source verify.
- Must document calf/feeder health and weaning.
- Provide VB with the method of marketing and appropriate contact information for a "show list."
- Cost: \$300 for RMV. This can be applied to certification cost of between \$3 and \$7 per head.

The Feedlot Questions

We travelled the country and met with many of the top feedlots:

- What are the calves worth?
 - Relative Market Value
- What drives their value?
 - Star Ratings
- How can we validate the system?
 - Send in data on a herd of known quality and VB will score them for free.
- Were they properly managed prior to delivery?
 - Audited vaccinations & weaning
- How can we buy them?
 - VB is committed to supporting and enhancing existing marketing channels.
 - Web site "show list on a password protected site."
 - Outbound emails notifying buyers/feedlots of the calves available.
 - Therefore, not changing how or when the calves will be marketed.

Our question, will feedlots pay more for better calves?

Tugaw Fall '12 Steer Calves Marketed May 31st, via Superior

- Pre-conditioned and weaned per a Vac 45 protocol.
- Sired by known, high quality genetics.
- Base weight of 540 pounds with a mid-June delivery date in Twin Falls, ID.
- Superior rep, Jim Davis, predicted the calves would bring between \$1.50 and \$1.58.

Genetic Merit Scorecard		
Breeds: Angus		
Figure Sources: Pure 25		
2012 Fall Users		
Estimated at wean weight of 1100 lbs.		
Average Daily Gain	Carcass Weight	Feed:Gain
★★★★	★★★★	★★
Ribeye Area	Yield Grade	Percentage of Choice
★★★★	★★★★	★★★

Calves sold for \$1.68 with aggressive bidding!

Conclusions

- By sending clear value signals:
 - Cow/calf producers will be paid for quality.
 - Feedlots can source based on value.
 - Seedstock producers will be paid more for better bulls.
 - Associations will benefit by increased value for registered bulls and significant disincentives for home raised bulls.
 - Also, associations can benefit financially through referral relationships with Verified Beef.
 - Genetic improvement will accelerate.
 - The industry will produce a better product!
- Questions?

Five Star☆☆☆☆☆ Carcass Quality:

- Harvest data from June, 2012:
- 396 steers fed NHTC went:
 - 99.5% Choice
 - 88.4% CAB
 - 25.1% Prime
- 825 average carcass weight.
- Premium of \$193 / head over Select!

Unmatched Quality!

Top Carcass Wgt & Conversion:

- Young cows (2 – 6 years of age) in body condition 5.5 weighed 1175 pounds.
- Back grounded from 575 to 750.
- Fed to an average carcass weight of 929 lbs on July 18th, 2012.
- Converted 5.4:1 on the finished ration from 750 pounds to a 1415 pay weight.
- Returned \$1.72 / pound!

Worth \$\$\$ over market!

Highest Genetic Merit Score Card Yet:

- Dec '11 cull heifer data:
 - From 882 lbs., gained 4.8 per day. Converted at 6.1:1.
 - 59.2% YG 1 & 2, No YG 4's.
 - 838 lb. carcass with a 14.0 REA!
 - 98% Choice with 75.5% CAB & Prime!
 - Returned \$1267 per head!
- Dec '12 cull heifer data:
 - From 906 lbs., gained 4.9 per day. Converted 4.7:1
 - 42% YG 1 & 2, 4% YG 4's.
 - 882 lb. carcass with a 14.4 REA!
 - 98% Choice with 82% CAB & Prime!
 - Returned \$1,317 per head!

Predictably Good Rel. Mkt Value: +24.73
